BUG-002	cn utility function not covered in unit tests	Low	Low	Open

Bug Report #1: BUG-001

Bug Summary

Title: Phone number formatting truncates input after 11 digits without warning

Bug Details

Field	Value
Bug ID	BUG-001
Component	utils.ts - formatPhoneNumber
Severity	Medium
Priority	Medium
Status	Open
Reporter	QA Team
Assignee	Development Team
Date Found	2024-01-15
Environment	Production
Browser	All

Description

The `formatPhoneNumber` function silently truncates phone numbers longer than 11 digits. Users are not warned that their input is being modified, which could lead to data loss.

Steps to Reproduce

1. Navigate to any page with phone input field
2. Enter a phone number with more than 11 digits: 011245552461234
3. Observe the formatted output

Expected Result

- Either accept all digits with proper formatting
- OR display a validation error message indicating the maximum length

Actual Result

- Phone number is silently truncated to 11 digits
- Output: (+2) 011 245 552 46 (only first 11 digits)
- No error or warning message displayed

Evidence

```
// Current implementation (line 29 in utils.ts)
return `(+2) ${phoneNumber.slice(0,3)} ${phoneNumber.slice(3,6)} ${phoneNumber.slice(6,9)} ${phoneNumber.slice(9,15)}`;

// This only takes the first 11 digits, ignoring any additional input
```

Test Case

```
test('should handle phone numbers longer than 11 digits', () => {
  const result = formatPhoneNumber('011245552461234');
  // Currently returns "(+2) 011 245 552 46"
  // Expected: Either format all digits or throw/return error
});
```

Screenshot/Recording

Input: 011245552461234 (15 digits)
Output: (+2) 011 245 552 46 (11 digits formatted)
Lost: 1234 (4 digits silently dropped)

Suggested Fix

1. Add input validation to reject numbers > 11 digits
2. OR extend formatting to handle international numbers
3. Add user feedback for invalid input length

Bug Report #2: BUG-002

Bug Summary

Title: cn utility function has 0% test coverage

Bug Details

Field	Value
Bug ID	BUG-002
Component	utils.ts - cn function
Severity	Low
Priority	Low
Status	Open
Reporter	QA Team
Assignee	Development Team
Date Found	2024-01-15
Environment	Development
Browser	N/A

Description

The `cn` utility function (line 4-6 in `utils.ts`) is not covered by any unit tests, resulting in only 80% function coverage and 96.87% line coverage.

Steps to Reproduce

1. Run `npm run test:coverage`
2. Observe coverage report
3. Note that line 5 is uncovered

Expected Result

- 100% function coverage
- All utility functions should have unit tests

Actual Result

- Function coverage: 80%
- Line 5 (`return twMerge(clsx(inputs));`) is uncovered

Evidence

File	% Stmts	% Branch	% Funcs	% Lines	Uncovered Line #s
All files	97.29	100	80	96.87	
utils.ts	97.29	100	80	96.87	5

Code Location

```
// Line 4-6 in src/lib/utils.ts
export function cn(...inputs: ClassValue[]) {
  return twMerge(clsx(inputs)); // Line 5 - NOT COVERED
}
```

Suggested Fix

Add unit tests for the `cn` function:

```
describe('cn', () => {
  test('merges class names correctly', () => {
    expect(cn('class1', 'class2')).toBe('class1 class2');
  });

  test('handles conditional classes', () => {
    expect(cn('base', false && 'hidden', true && 'visible')).toBe('base visible');
  });

  test('merges tailwind classes correctly', () => {
    expect(cn('p-4', 'p-2')).toBe('p-2'); // tailwind-merge should use last value
  });
});
```

Bug Severity Classification

Severity	Description	Response Time
Critical	System crash, data loss, security breach	Immediate
High	Major feature broken, no workaround	24 hours
Medium	Feature partially broken, workaround exists	1 week
Low	Minor issue, cosmetic, enhancement	Next sprint

Bug Priority Classification

Priority	Description	SLA
Critical	Production down, affects all users	4 hours
High	Affects many users, business impact	1 day
Medium	Affects some users, moderate impact	1 week
Low	Affects few users, minimal impact	2 weeks
